

Key Benefits

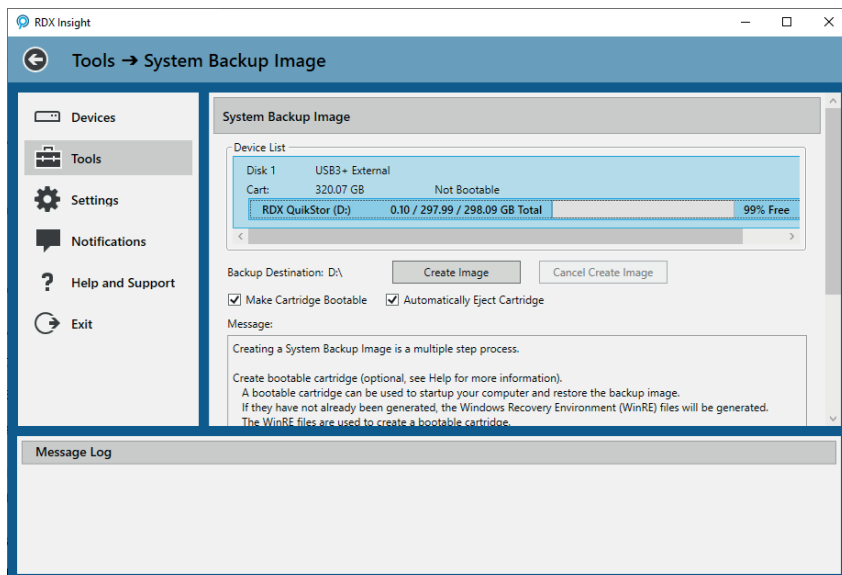

- **1-click creation of boot cartridge and backup**
Full backup of entire Windows® machine to RDX cartridge with boot option
- **Bare Metal Restore**
Users can quickly reboot their laptop or desktop directly from their RDX cartridge
- **Cloud Backup**
Easily backups up data on Dropbox and Google Drive to implement the 3-2-1-1 backup strategy
- **Encryption**
Allows to encrypt data on RDX media on all RDX QuikStor systems
- **Media Formatting and Partitioning**
Allows to change the factory set NTFS format to other desired formats
- **RDX device dashboard**
Shows information about RDX devices and cartridges
- **Usage / full cartridge warnings**
Informs user when individual selective capacity threshold is reached
- **Firmware Update**
RDX Insight provides the functionality to install new firmware to the RDX QuikStor drives
- **Support Features**
Gathers media and drive information for support cases

RDX® Insight™ is a free software from Overland-Tandberg that offers data security and disaster recovery features to RDX systems and appliances. In addition, RDX Insight provides management, configuration and control of RDX systems.

Flexible Hybrid Cloud Data Protection

RDX Insight continues to deliver business-grade, easy to use data management capabilities that focus on such business requirements as disaster recovery, security, and cloud services integration.

System Backup and Air Gap safeguard for business continuity

RDX Insight provides full system backup of all applications and data. This makes RDX an affordable business-grade data protection solution without the use of a third party backup software. Full Air Gap protection against malware and ransomware attacks is ensured by automatic media-eject after backup.

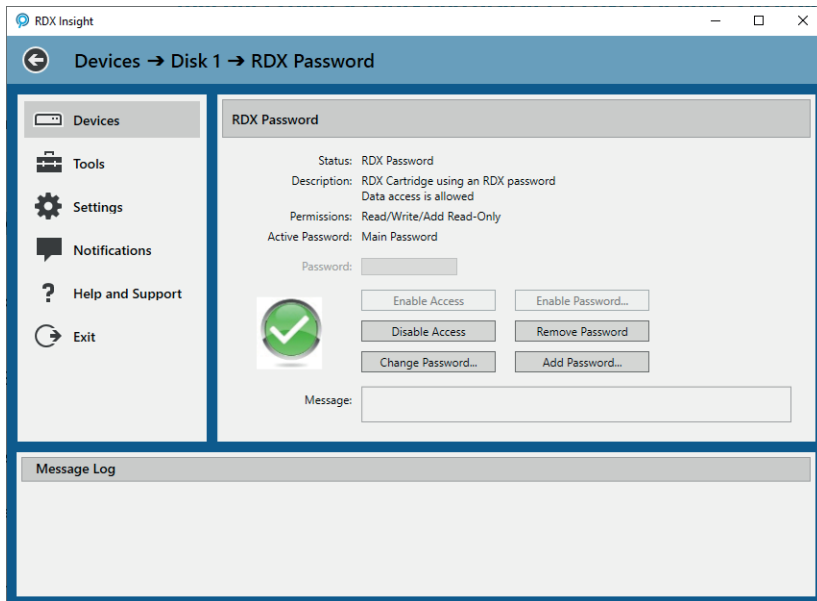

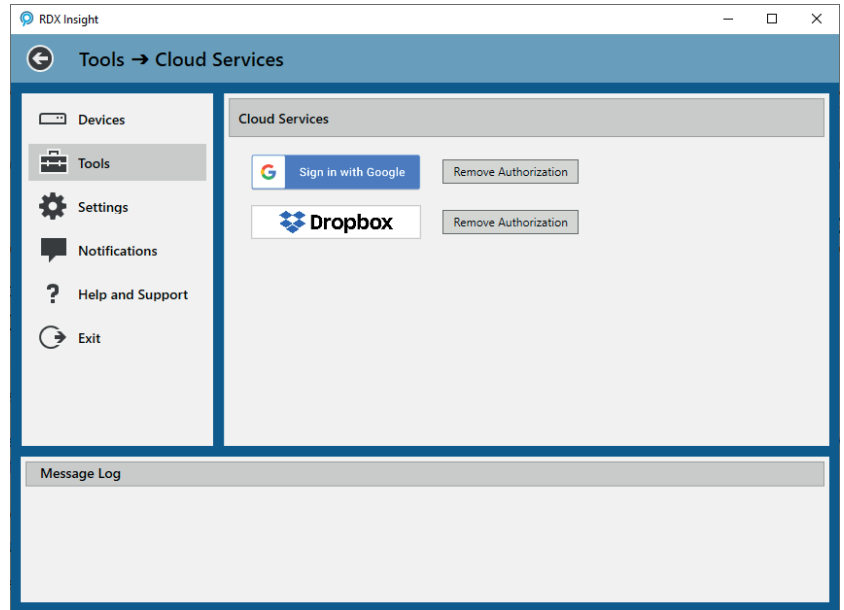

Bare Metal Restore for stress free recovery

RDX Insight allows users to create a bootable RDX media. In conjunction with the system backup, this provides a complete one-click restore after a total system or disk crash.

Cloud Services Backup

RDX Insight is able to backup data on Dropbox and Google Drive to RDX, which enables users either to access their data locally or have a local archive. In case of an inaccessible or slow network, data can be fast and easily accessed from the RDX media. If needed, data can be freed up from the cloud to save expensive cloud storage space.

In addition, data from RDX can also be transferred to Dropbox or Google drive to implement a secondary offsite data repository.

Password Protection

RDX cartridges can be protected via password from unauthorized access. This ensures that data is secured when cartridge is not in use and during off-site vaulting or transit.

In addition to a full-access password, a read-only password can be assigned. This allows to handover RDX cartridges to third parties without the risk of data being overwritten, deleted or added.

Every time a cartridge is re-inserted, the appropriate password has to be entered. To protect data while the cartridge is inserted, a disable access feature is provided.
