

Warning!

Read This First

After initial power up with new drives, an XSD 40 desktop appliance takes up to **10 minutes** to complete the new appliance initialization process. During this time, the Status LED (see graphic) flashes an alternating green and amber pattern.

 **WARNING: Under no circumstances should power be removed while the system is in this state! Doing so may render the appliance inoperable.**

Once initialization is complete, the system automatically reboots and the Status LED displays a solid green color. Continue with **Connect for the First Time** in your quick start guide.

XSD 40
