

“SambaCry” Security Vulnerability

June 2017

This hot fix addresses the “SambaCry” security vulnerability in SnapServer's support for Windows Networking (SMB/CIFS). The hot fix requires GuardianOS 7.7.220 and installs via the OS Update page in the Web Management Interface. Installation does not require restarting the server but existing SMB connections will be disconnected.

For more information on the vulnerability, see CVE-2017-7494:
